

Handling of Radiation and Radioactive Material

1. Radioisotope workers (including synchrotron radiation workers at KEK, SPring-8, and other facilities) and X-ray workers are managed in [the Radiation Safety Office](#) (1st basement floor of the Bioscience Bldg.).

Users (including students of other graduate and undergraduate schools) must register through the radiation control staff in their laboratories. The user is required to attend a training course, undergo a radiation dosimetry examination, and undergo a medical checkup.

2. The use of radiation or radioactive materials and the installation of equipment should promptly consult with the Radiation Safety Office during the planning stage.

For details, please refer to [the Safety Manual](#) of the Environment, Health, and Safety Office.
